

NOTES:

REINFORCEMENT GRADE 60, HS20 DESIGN  
 CONCRETE 5000 psi  
 WEIGHT 11,000 LBS.

16 FT LONG CATTLE GUARD

To maintain the optimum life expectancy of this product, they should be set on concrete footings that are level, and go down below frost level. (Concrete can not be allowed to twist or turn, or it will crack.) The bearing points are on the long side of the product, hence the footings should be on those sides. Rate of traveling speed should not exceed 25 MPH. There should also be a trench so that the water and debris can fall thru the openings and flow out through the trench, so you don't get a build up of debris. Otherwise you will have to do perform periodic maintenance.
